

# November 2024 Accessibility and Usability Feature Release

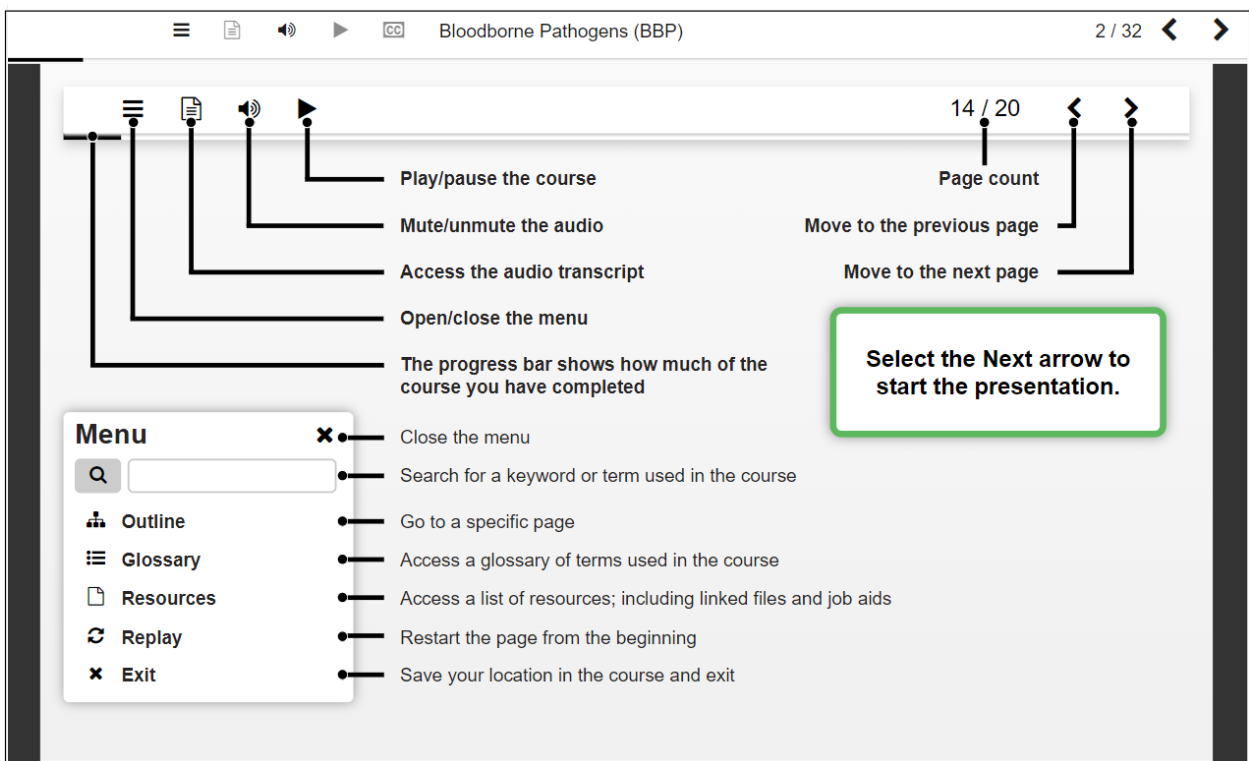

Exciting enhancements are on the way! UL Solutions is pleased to announce the release of accessibility/usability features for the EHS Safety catalog. Starting in November, when you launch our training, you may notice:

## Highlights

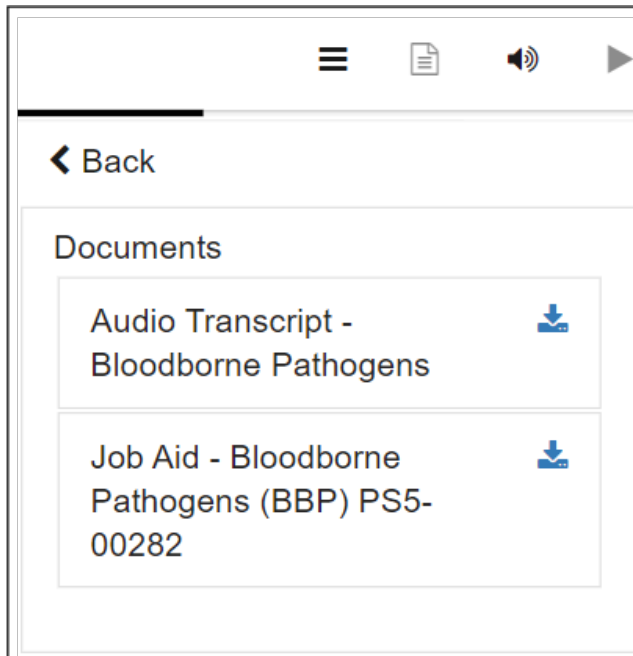

1. A Closed Caption (CC) button added to the navigation bar. You will begin to see the CC button to the right of the Play button. As closed captioning text is added to courses, the button will change from inactive to active.

2. An improved Help page demonstrating how to navigate.

3. Job aids and narration transcripts added to the course's Resources section. You may reference, download, save or print these files.

4. Better viewability for mobile users with a feature that helps with scaling the course to the maximum viewable size.

### **More to Come**

At this time, we have assessed our courses against WCAG 2.2 Level A and AA Accessibility guidelines and have begun retrofitting some titles.

While the retrofitted courses are not fully 508-compliant, we do offer a transcript of the audio, and the text on screen can be read with assistive technology, such as screen-reader software. Our courses also work with modern browser accessibility features, such as Chrome's Live Caption. These options meet the needs of our users today.

We plan to publish a voluntary accessibility statement when our assessments are finished. We will also determine what additional accessibility features we can or will pursue in 2025.
